Tja

Provade massa olika l sningar f r att f f rg divarna "skal-bara". Och kom fram till att ha img'n f rst och floata den till h ger och sedan ha f gdivarna satta till "overflow:auto;" nog var b st och mest konsis mellan firefox/chrome. Den andra l sningen jag provade var att ha en div med display:table, och tv divs I den med display:table-cell. Det fungerade perfekt p firefox men knasigt I chrome.

Bilderna I den gula l dan l ste jag genom att anv nda margins, och beh lla dem static. K ndes som det b sta s ttet att f gula l dan att inte krasha med mindre storlekar.

Sen f s kte jag anv nda s mycket klasser som m jligt ist llet f r ID'n. Hoppas det blir l tt versk dligt.
